

Whitepaper

Green Earth through CO₂ reduction

November 2023

<https://token-anagata.io>

OUR VISION

Anagata Token (AHA) has been officially subscribed in December 2021 and our vision is to be a trustable and biggest token from Indonesia for carbon dioxide (CO₂) reduction, through green projects collaboration. Anagata's vision is to accelerate the transformation by collaborating with green projects and developing carbon tracing – tracking. Start from Indonesia, Anagata will support global green projects with sustainable economic value in the future.

In the next 5 years, Anagata will focus on accelerating CO₂ reduction, together with many stakeholders in Indonesia and Asia that has focus on environment conservation. Anagata will give an opportunity where everybody could invest or donate in many green projects. Anagata will focus on mangrove, coral projects, also other CO₂ reduction projects such as dense forest areas. Indonesia as a country has the largest mangrove forest in the world, namely 3.3 million hectares of mangrove forest (20% of the total mangrove forest in the world), with that Anagata wants to contribute in green projects acceleration.

Green Earth through CO₂ reduction

Democratizing Carbon Adoption

OUR MISSION

It is Anagata's primary mission to support and accelerate CO₂ reduction in Indonesia and Asia region, therefore it's our priority that we collaborate with all key stakeholders that are highly relevant and important to reach the mission goals. Our mission is to connect the dots of any green ideas to be more sustainable, for environment impact and financial impact. We believe that :

Environment Sustainability requires Collaborative Sustainability

With a potential of 3.3 million hectares of mangrove conservation and more than 3.5 million hectares of coral reefs, 125 million hectares of tropical forest, which will be developed further in the future, Indonesia has an important position in efforts for global CO₂ reduction. This reduction effort will be well accelerated by identification into measurable units so that the community can make a real contribution through adoption and investment mechanisms.

Anagata's ecosystem will be used as **investment** and **adoption** for :

- ❖ Carbon Footprint Capture
- ❖ Carbon Asset Registry with blockchain technology
 - Carbon asset from Green Energy projects
 - Carbon asset from green sustainability
(i.e. Mangrove, Corals, Forest areas)
- ❖ Investment and adoption for green projects
 - Green Energy projects
 - Green Sustainability

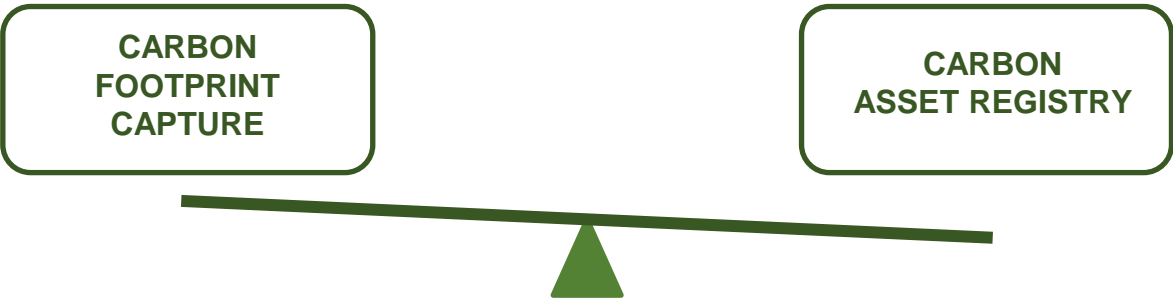

OUR SOLUTIONS

There are three core activities to reduce carbon as stated in many research and ideas, which are: replace fossil energy to green energy, **maintain and increase planting trees / mangrove forest** and taxed carbon producers or create market mechanism to balance both. With these concerns and to get a global impact, blockchain technology is a strategic option to have an integrated solution.

Anagata Token (AHA) is a decentralized token based on the Binance Smart Chain (BSC) technology, providing safe, secure and yield for all holders through green projects and carbon dioxide (CO₂) reduction platform.

Our solution will be utilizing blockchain technology to track CO₂, which will be in a form of NFT. Anagata will be collaborating with **existing green projects** and **future green projects**, to enable larger areas that will be covered and optimizing CO₂ reduction within specific regions that require more support and to have a mass movement.

OUR CORE PROJECT IN THE NEXT 3 YEARS

The most basic thing to do in achieving a net zero emissions program is calculating the carbon footprint and identifying carbon reduction efforts. The Obligations for this carbon deficiency (especially in corporate & industry) require carbon credits that have been registered and recognized internationally.

In the short term, the Anagata Token Project focuses on two main activities : **carbon footprint capture** and **carbon registry**.

Token AHA (Alam Hijau Anagata), Token Kripto Ramah Lingkungan

Liputan6.com, Bali - Mata uang **kripto** atau *cryptocurrency* saat ini semakin populer di dunia investasi namun kerap disebut tak ramah lingkungan. Hal tersebut muncul karena pada proses 'penambangan kripto' memerlukan sumber energi, terutama berasal dari listrik berbahan bakar batu bara.
